

Figure S1. Effect of BAPP on *Pst* DC300 growth. *Pst* DC3000 was grown for 24 h in NB liquid medium. Sterilized filter paper (diameter 6 mm) containing 20 μ l of sample solution was placed onto a NB medium plates supplemented with bacterial suspension (final concentration 1×10^4 cfu/ml). The halo appeared on the plate was measured after incubation for 2 days at 30°C.
