Figure S1

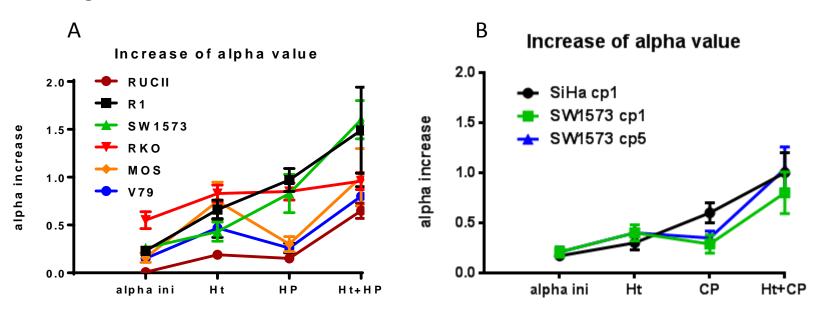

Figure S1. Increase of the initial value of the linear parameter, α , after sensitization with hyperthermia (Ht), halogenated pyrimidine (HP) and the combination of Ht and HP in several cell lines (A) and increase of the initial value of the linear parameter, α , after sensitization with hyperthermia (Ht), cisplatin (CP) and the combination of Ht and CP (B). Each experiment was performed at least 3 times. Error bars are s.d. The temperatures used are indicated in figures 1-3. Cp1 and cp5 means 1 μ M and 5 μ M respectively.
