APPENDIX 1. Characters and character-states for phylogenetic analysis by Ezcurra et al. (2014)
who provide additional details and primary references.

- (1) Teeth, tooth attachment: subthecodont (protothecodont) (0); ankylothecodont (1); pleurodont (2); acrodont (3); thecodont (4).
- (2) Teeth, distal curvature of marginal teeth: strong (0); slight (1); absent (2). ORDERED.
- (3) Teeth, serrations on crown: absent (0); present (1).
- (4) Teeth, lateral compression of marginal dentition: only distally or absent (0); over two-thirds of tooth (1).
- (5) Snout, shape of antorbital region: broad, nasal largely dorsal element (0); narrow and tall, nasal has nearly vertical contribution to snout (1).

- (6) Snout, antorbital-postorbital ratio: postorbital part (posterior margin of orbit to caudal tip of skull) longer than antorbital part (0); antorbital part of snout (tip to anterior margin of orbit) longer but nasal shorter or equal in length to frontal (1); antorbital part of snout (tip to anterior margin of orbit) longer and nasal longer than frontal (2). ORDERED.
- (7) Snout, proportions: width > height (0); width < height (1).
- (8) Premaxilla, number of teeth: ≥ 5 (0); 2 to 4 (1); 0 (2). ORDERED.
- (9) Premaxilla, anterior process: absent (0); present (1).
- (10) Premaxilla, downturned alveolar margin: no (0); slightly (1); strongly (2). ORDERED.
- (11) Premaxilla, narial shelf: more or less sharp edge between lateral (= sculptured, if sculpture is present) surface of skull and ventral wall of naris (0); rounded ventral narial shelf that transitions smoothly into ventral edge of skull (1).
- (12) Premaxilla, postnarial process (= dorsolateral process): absent (0); small, extends slightly behind naris but maxilla forms most of the border of the external naris (1); well-developed, forms more of the border of the external naris than the maxilla or excludes the maxilla from participation in the external naris (2). ORDERED.
- (13) Maxilla, dorsal process: absent (0); starts just behind external naris, extends to level of dorsal narial margin (1); spike-like, just in front of orbit, overlies lacrimal (2); massive, pillar-like, extends above narial margin (3).
- (14) Maxilla, contact with prefrontal: absent (0); present (1).
- (15) Maxilla, tooth number: 25 or fewer (0); 26 or more (1).
- (16) Maxilla, caniniform region: region absent (0); region present (1); one or two caniniform teeth present (2). ORDERED.

(17) Maxilla, dorsal of caniniform tooth or region: flat (0); swollen (1); well-defined buttress (2).

ORDERED.

(18) Septomaxilla, shape: pillar-like (0); curled sheet (1); absent (2). ORDERED.

(19) Septomaxilla, lateral sheet-like exposure: absent (0); present (1).

(20) External naris, position: marginal (minimal distance between nares \geq 0.35 snout width at same level) (0); close to midline (1); confluent (2). ORDERED.

(21) External naris, posterodorsal expansion: absent (0); pinched between nasal and maxilla (1); greatly enlarged, between nasal and lacrimal (2). ORDERED.

(22) Nasal, external narial shelf: absent (0); present (1).

(23) Lacrimal, length: participates in margin of external naris (0); does not reach external naris (1).

(24) Lacrimal, duct: opens on posterior edge of lacrimal (0); opens laterally near posterior edge of lacrimal (1); opens laterally on concave surface of lacrimal (2). ORDERED.

(25) Frontal, orbital border: absent or narrow (0); broad and forms most of dorsal edge (1).

(26) Frontal, posterolateral process: absent, frontal-parietal suture forming right angle to parasagittal plane (0); absent or very short, f-p suture forming obtuse angle to parasagittal plane (1); long, narrow, f-p suture forming acute angle with parasagittal plane (2).

ORDERED.

(27) Parietal, extension over interorbital region: absent or marginal (0); present (1).

(28) Parietal, ventrolateral flange: absent (0); present (1).

(29) Parietal, sagittal crest: absent (0); present (1).

(30) Parietal, size of pineal foramen: large, more than 25% of mid-parietal length (0); small, less than 25% of mid-parietal length (1); absent (2). ORDERED.

(31) Parietal, position of pineal foramen in dorsal view: completely enclosed by parietals in the anterior half of the bone (excluding posterolateral processes of the parietals) (0); completely enclosed by parietals close to mid-length or in the posterior half of the bone (excluding posterolateral processes of the parietals) (1); enclosed by both frontals and parietals (2).

ORDERED.

(32) Prefrontal, suture with nasal: parasagittal, at least in its caudal third (0); anterolateral (1).

(33) Prefrontal and jugal, tuberous ornamentation on their external surface: absent (0); present (1).

(34) Squamosal, anterodorsal process: no or little underlap of posterior process of postorbital (0); extensive underlap of posterior process of postorbital (1).

(35) Squamosal, posterodorsal process: absent (0); present (1).

(36) Squamosal, ventral process: broad, with proximal length approximately equal to dorsoventral height (0); narrow, with proximal length less than dorsoventral height (1); squamosal confined dorsally (2). ORDERED.

(37) Squamosal, occipital shelf: broad, contributes to occipital surface of skull (0); narrow, quadrate exposed in occipital view (1); absent, posterior edge of quadrate exposed in lateral view (2). ORDERED.

(38) Upper temporal fenestra: absent (0); present, postfrontal does not enter (1); present, postfrontal enters (2). ORDERED.

(39) Lower temporal fenestra: absent (0); present, quadratojugal excluded (1); present, quadratojugal enters or is absent (2).

- (40) Postorbital region, ventral temporal bar (zygomatic arch): absent (no fenestra) (0); tall, occupying more than 20% of skull height (1); narrow but complete, occupying less than 20% of postorbital skull height (2); incomplete (3); absent (with fenestra) (4). ORDERED.
- (41) Postorbital region, ventral margin: straight or convex (0); concave, though nowhere dorsal to tooth row (1).
- (42) Postorbital, dorsal and lateral surfaces: form smooth curve (or dorsal surface absent, postorbital not participating in skull roof) (0); sharply divided (meeting at edge) (1).
- (43) Postorbital, lateral boss at orbital margin: absent (0); present (1).
- (44) Postorbital, posterior process if temporal fenestrae are absent reaches supratemporal or if at least one fenestra is present extends up to or beyond posterior margin of fenestrae: absent (0); present (1).
- (45) Quadratojugal, anterior extent: maxilla-quadratojugal suture (0); extending anterior to ventral portion of squamosal, but not contacting maxilla (1); \leq anterior extent of ventral portion of squamosal (2); quadratojugal absent (3). ORDERED.
- (46) Quadratojugal, anterodorsal process: absent (0); present, covered by squamosal (1); present and superficial (2).
- (47) Palate, suborbital fenestra: absent (0); present (1).
- (48) Pterygoid, teeth on transverse flange: single row on edge (0); additional teeth anterior to single row (or no rows recognizable) (1); absent (2).
- (49) Parasphenoid, dentition posterior to level of transverse flange: absent (0); along edges (1); on edges and posterior body (2).

(50) Basisphenoid, basipterygoid processes: short, broad, with short articulating facets facing anterolaterally (0); long, wing-like, with long articulating facets facing anteriorly (1); long, with hemispherical articulating facets facing more or less anterolaterally (2).

(51) Supratemporal: broad element of skull table (0); slender, in parietal and squamosal trough (1); absent (2). ORDERED.

(52) Tabular: large, sheet-like (with ventral expansion) (0); narrow, slender (1); absent (2). ORDERED.

(53) Postparietal, size: sheet-like, both together not much smaller than suproccipital in state when the posttemporal fenestra is small (because of broad, plate-like dorsal process of suproccipital) (0); small, splint-like (1); absent (2). ORDERED.

(54) Quadrata, shape: straight posteriorly (0); shallowly emarginated (1); with conch (2). ORDERED.

(55) Quadrata, occipital margin: anterior slope $\geq 80^\circ$ (0); $80^\circ >$ anterior slope $> 50^\circ$ (1); anterior slope $\leq 50^\circ$ (2). ORDERED.

(56) Opisthotic, paroccipital process shape: vertical or nearly vertical sheet, height ≥ 0.5 transverse length (0); elliptical in cross-section, height < 0.5 transverse length (1).

(57) Opisthotic, paroccipital process attachment: ends freely (0); weak contact (1); strong contact (2). ORDERED.

(58) Posttemporal fenestra, size: large compared to suproccipital (narrow dorsal process of suproccipital tapers dorsally) (0); small (because of broad, plate-like dorsal process of suproccipital) (1); more or less foramen (2); absent (3). ORDERED.

(59) Coronoid bones, number: two (0); one (1).

(60) Angular, shape of posteroventral edge: ridged or keeled (0); rounded (1).

- (61) Angular, size of lateral exposure: wide (0); narrow (1).
- (62) Retroarticular process, size: absent (0); small (1); large (2). ORDERED.
- (63) Retroarticular process, composition: composite (0); formed only by articular (1).
- (64) Stapes, shape: robust, with thick shaft (0); slender, rod-like shaft (1).
- (65) Stapedial foramen: present (0); absent (1).
- (66) Hyoid: short, directed to quadrate region (0); long, directed posteriorly beyond skull (1).
- (67) Vertebrae, notochordal canal: present throughout ontogeny (0); absent in adults (1).
- (68) Cervical vertebrae, centra length: no longer than posterior dorsals (0); longer than posterior dorsals but fourth and fifth cervical centra less than three times their height (1); longer than posterior dorsals and fourth and fifth cervical centra equal or more than three times their height (2).
- (69) Cervical vertebrae, ventral surface of centra: rounded (0); strongly keeled (1).
- (70) Cervical vertebrae, neural arch excavation (lateral to the base of the neural spine): absent (0); shallow (1); deep, represented by a pit (2). ORDERED.
- (71) Cervical vertebrae, neural spines: triangular (0); rectangular (1).
- (72) Dorsal vertebrae, ratio of height of mid-dorsal neural spines from base of zygapophysis: maximum centrum height: ≤ 1.5 (0); > 1.5 (1).
- (73) Dorsal vertebrae, mid-ventral surface of centra: rounded (0); ridged (with slightly swollen sides) (1); keeled (sharp edge) (2). ORDERED.
- (74) Dorsal vertebrae, transverse processes in trunk: short (0); moderately long (1).
- (75) Cervical and dorsal vertebrae, mammillary processes on posterior cervical and anterior dorsal neural spines: absent (0); present (1).

- (76) Cervical vertebrae, accessory process on anterolateral surface of anterior cervical ribs:
absent (0); present (1).
- (77) Cervical vertebrae, proximal rib heads: some or all holocephalous (0); all dichocephalous (1).
- (78) Dorsal vertebrae, trunk ribs: dichocephalous (0); holocephalous (1).
- (79) Sacral vertebrae, sacral ribs: two unequal (0); two equal (1); three (2). ORDERED.
- (80) Sternum: not mineralized (0); mineralized (bone or calcified cartilage) (1).
- (81) Interclavicle, anterior half shape: cross-shaped (anterior process present) (0); T-shaped (anterior process absent) (1).
- (82) Interclavicle, webbed between lateral and posterior processes: yes (head triangular or diamond-shaped) (0); no (rather sharp angles between processes) (1).
- (83) Interclavicle, minimal shaft width: ≤ 0.105 tip-to-tip width (0); ≥ 0.137 tip-to-tip width (1).
- (84) Cleithrum: present (0); absent (1).
- (85) Scapula, anterior margin: straight, at least dorsally (0); convex along entire length (1).
- (86) Scapula, supraglenoid foramen: absent (0); present (1).
- (87) Coracoid, triceps process: absent or small (0); large (1).
- (88) Humerus, ratio of width of distal head to shaft length: ≥ 0.3 (0); < 0.3 (1).
- (89) Humerus, entepicondyle: moderately large (0); strongly developed at maturity (1).
- (90) Humerus, entepicondylar foramen: present (0); absent (1).
- (91) Humerus, ectepicondylar region: foramen, process bridged (0); supinator process present, groove present (1); process, groove and foramen absent (2). ORDERED.
- (92) Radius-humerus, length ratio: < 0.68 (0); 0.68 to 0.82 (1); > 0.82 (2). ORDERED.
- (93) Radius, shape: straight (0); twisted in lateral view (1).

(94) Ulna, olecranon process: absent or very low (0); prominent but lower than its transverse depth at base (1); strongly developed, being higher than its transverse depth at base (2).

(95) Carpus, medial centrale carpi: present (0); absent (1).

(96) Carpus, lateral centrale carpi: large (0); small or absent (1).

(97) Pelvic girdle: solid (0); fenestrated (= open acetabulum) (1).

(98) Pubis, lateral and distal pubic tubercles: small or absent (0); large (1).

(99) Pelvic girdle, acetabulum: elongate (0); circular (1).

(100) Hind limb–trunk length ratio: hind limb much shorter than trunk (0); hind limb almost as long as trunk or longer (1).

(101) Femur, distal articular surface: uneven, fibular condyle projecting distinctly beyond tibial condyle (0); both condyles prominent and approximately at same level (1); both condyles do not project beyond shaft (distal articular surface concave or almost flat) (2).

(102) Femur, maximum length/distal width ratio: < 4 (0); ≥ 4 (1).

(103) Femur-humerus, length ratio: > 1.2 (0); 1 to 1.2 (1); < 1 (2). ORDERED.

(104) Femur-humerus, shaft diameters: femur = 150% humerus (0); more or less equal (up to 120%) (1).

(105) Distal hind limb-pes length, ratio: articulated tibia + tibiale/astragalus longer than articulated 4th metatarsal + digit (0); shorter (1).

(106) Proximal tarsals, astragalus-calcaneum articulation: flat (0); concave-convex (1); foramen on calcaneum, articulation expanded (2); sutured or fused (3).

(107) Proximal tarsals, lepidosauriform ankle joint: absent (0); present (1).

(108) Proximal tarsals, lateral tuber on calcaneum: absent (0); present (1).

(109) Metatarsus, metapodials overlapping proximally: absent (0); present (1).

- (110) Metatarsus, metatarsal IV: short (0); long (at least 40% of digit IV) (1).
- (111) Metatarsus, fifth distal tarsal: present (0); absent (1).
- (112) Metatarsus, metatarsal V: straight (0); hooked (1).
- (113) Skull, relative length of snout: <50% of total skull length (0); equal to or >50% of total skull length (1).
- (114) Premaxilla, contact with prefrontal: absent (0); present (1).
- (115) Premaxilla, body size: small, the premaxillary body forms less than half of snout in front of the posterior border of the external nares (0); large, the premaxillary body forms half or more than half of snout in front of the posterior border of the external nares (1).
- (116) External nares, shape: rounded (0); elongate (1).
- (117) Snout, diastema between maxillary and premaxillary teeth: absent (0); present (1).
- (118) Antorbital fenestra: absent (0); present (1).
- (119) Maxilla, antorbital fossa exposed in lateral view: absent (0); present (1).
- (120) Maxilla, anterior maxillary foramen: absent (0); present (1).
- (121) Maxilla, ventral margin: straight, concave or sigmoid (0); convex (1).
- (122) Maxilla, posterior extension: at level or posterior to posterior orbital border (0); anterior to posterior orbital border (1).
- (123) Maxilla, orbital exposure: absent (0); present (1).
- (124) Maxilla, tooth plate: absent (0); present (1).
- (125) Maxilla, number of tooth rows: single row (0); multiple rows (1).
- (126) Maxilla, location of teeth: only on occlusal surface (0); on occlusal and lingual surfaces (1).

(127) Nasal, shape of anterior margin at midline: strongly convex with anterior process (0); transverse with little convexity (1).

(128) Frontal, suture with nasal: transverse (0); oblique, forming an angle of at least 30° with long axis of the skull and frontal(s) entering between both nasals (1); oblique, and nasal entering considerably between frontal(s) in a non-interdigitating suture (2).

(129) Frontal, narrowly approaches or enters the anteromedial margin of the supratemporal fossa: absent, in which the suture between the frontals and parietals is usually transverse (0); present (1).

(130) Frontal, shape of dorsal surface next to sutures with postfrontal and parietal: flat to slightly concave (0); longitudinal depression with deep pits is present (1).

(131) Postfrontal, shape of dorsal surface: flat or slightly concave towards raised orbital rim (0); depression present with deep pits (1).

(132) Quadratojugal, anterior process: present (0); absent (1).

(133) Parietal, median contact between both parietals: suture present (0); fused with loss of suture (1).

(134) Skull roof, distinct posterior emargination in late ontogeny: absent (0); present (1).

(135) Vomer, contact with maxilla: absent (0); present (1).

(136) Palatine, palatal teeth: present (0); absent (1).

(137) Pterygoids, contact between each other: join cranially (0); remain separate (1).

(138) Pterygoid, palatal process: extends anterior to the anterior limit of the palatine (0); forms oblique suture with palatine but process ends before reaching anterior limit of palatine (1); forms transverse suture with palatine (2).

(139) Pterygoid, teeth on palatine ramus: present in two fields (0), present in one field (1),
present in three fields (2); absent (3).

(140) Pterygoid, orientation of the transverse flange: directed predominately laterally (0);
directed anterolaterally (1).

(141) Pterygoid, transverse flange lateral margin: posterolateral margin with an acute corner (0);
posterolateral margin merges smoothly into anterolateral margin forming a smoothly convex
lateral outline (1).

(142) Ectopterygoid: simple overlap of ectopterygoid and pterygoid (0); complex overlap
between ectopterygoid and pterygoid (1); ectopterygoid absent (2).

(143) Ectopterygoid, shape along suture with pterygoid: transversely broad (0); posteroventrally
elongate and does not reach lateral corner of transverse flange (1); posteroventrally elongate
and reaches corner of transverse flange (2). ORDERED.

(144) Ectopterygoid, contact with maxilla: absent (0); present (1).

(145) Ectopterygoid, posterior expansion in contact with jugal: absent (0); present (1).

(146) Opisthotic, paroccipital process orientation: extends laterally forming 90° with parasagittal
plane (0); deflected posterolaterally at an angle of about 20° from the transverse width of the
skull (1).

(147) Opisthotic, paroccipital process shape: slender (0); robust, with anteroposterior dimension
at least one third greater than dorsoventral dimension (1) (deBraga and Rieppel, 1997;
modified from Müller, 2004:159).

(148) Opisthotic, club-shaped ventral ramus: absent (0); present (1).

(149) Lateral sphenoid: absent (0); present (1).

(150) Parasphenoid, position of foramina for entrance of internal carotid arteries leading to the pituitary fossa: lateral wall of braincase (0); ventral surface of parasphenoid (1).

(151) Basioccipital-basisphenoid: separate (0); fused to each other (1).

(152) Parasphenoid, cultriform process: reaching forward to the level of the posterior limit of the internal nares (0); short, not reaching the level of the internal nares (1).

(153) Prootic, lateral surface: continuous and slightly convex (0); crista prootica present (1).

(154) Prootic, anterior inferior process: absent (0); present (1).

(155) Prootic, contact with parietal: absent (0); present (1).

(156) Abducens foramina: in dorsum sellae (0); between prootic and dorsum sellae (1).

(157) Occipital condyle, position: even with craniomandibular joint (0); anterior to craniomandibular joint (1); posterior to craniomandibular joint (2).

(158) Lower jaw, distinct dorsal process behind the alveolar margin: absent, with a slightly convex dorsal margin behind the alveolar portion (0); present, formed by a dorsally well-developed surangular (1); present, formed by a dorsally well developed coronoid and sometimes the posterodorsal ramus of the dentary (2); present, formed only by a dorsally hypertrophied coronoid bone (3).

(159) Lower jaw, Meckelian fossa orientation: dorsomedially (0); mostly dorsally due to greatly expanded prearticular resulting in a ventral border of the fossa situated dorsal to the half height of the lower jaw at that level (1).

(160) Dentary, number of tooth rows: one (0); two (1); more than two (2). ORDERED.

(161) Jaw occlusion: single-sided overlap (0); flat occlusion (1); blade and groove (2).

(162) Surangular, anterior extension: beyond coronoid eminence (0); posterior to reaching the anterior border of the coronoid eminence (1).

- (163) Surangular, lateral shelf: absent (0); present (1).
- (164) Surangular, anterior surangular foramen: absent (0); present (1).
- (165) Surangular, posterior surangular foramen: absent (0); present (1).
- (166) External mandibular fenestra: absent (0); present (1).
- (167) Retroarticular process: not upturned (0); upturned (1).
- (168) Cervical vertebrae, postaxial cervical intercentra: present (0); absent (1).
- (169) Cervical vertebrae, distinct longitudinal lamina extending along the lateral surface of the centrum at mid-height in anterior cervical vertebrae: absent (0); present (1).
- (170) Cervical vertebrae, longitudinal lamina connecting the prezygapophysis and postzygapophysis on the third cervical neural arch: absent (0); present (1).
- (171) Cervical vertebrae, dimensions of postaxial anterior cervical neural spines: tall, with height and length approximately equal (0); long and low, with height lower than length (1).
- (172) Cervical vertebrae, postaxial cervical neural spines with an anterior overhang: absent (0); present (1).
- (173) Cervical ribs, slender and tapering at low angle to vertebrae: absent (0); present (1).
- (174) Cervico-dorsal vertebrae, parallelogram-shaped centra in lateral view, in which the anterior articular surface is situated higher than the posterior one: absent (0); present (1).
- (175) Dorsal vertebrae, intercentra: present (0); absent (1).
- (176) Dorsal vertebrae, length of the anterior dorsal centra: subequal to the height of the centrum (0); more than two times the height of the centrum (1).
- (177) Dorsal vertebrae, subcentral foramen in the lateral surface of the centrum: absent (0); present (1).

(178) Dorsal vertebrae, ratio between transverse width of diapophysis and length of the centrum in anterior dorsal vertebrae: <0.65 (0); >0.75 (1).

(179) Dorsal vertebrae, anterior and middle dorsal neural spines: sub-rectangular, with the anterior margin vertical, anterodorsally or slightly posterodorsally inclined (0); sub-triangular, with the anterior margin strongly posterodorsally oriented (1).

(180) Dorsal vertebrae, anterior centrodiapophyseal lamina or paradiapophyseal lamina: absent (0); present (1).

(181) Dorsal vertebrae, posterior centrodiapophyseal lamina: absent (0); present (1).

(182) Dorsal vertebrae, prezygodiapophyseal lamina on posterior cervicals and anterior and middle dorsals: absent (0); present (1).

(183) Dorsal vertebrae, postzygodiapophyseal lamina on anterior dorsals: absent (0); present (1).

(184) Dorsal vertebrae, dorsally opened pit lateral to the base of the neural spine: absent (0); present (1).

(185) Dorsal vertebrae, zygapophyses close to each other medially, respectively, in anterior-middle dorsals: absent, zygapophyses laterally divergent beyond the lateral margin of the centrum (0); present, zygapophyses mainly oriented in the parasagittal plane (1).

(186) Dorsal vertebrae, zygosphene-zygantrum articulation: absent (0); present (1).

(187) Sacral ribs, second sacral rib: not bifurcate (0); bifurcate with posterior process pointed bluntly (1); bifurcate with posterior process truncated sharply (2).

(188) Sacral and/or anterior caudal vertebrae, transverse processes and ribs: sutured to the vertebra (0); fused to the vertebra (1).

(189) Caudal vertebrae, anterior caudal neural spine height: moderately tall with height/length between >1.0 and <2.0 (0); low with height/length <1.0 (1); tall with height/length >2.0 and <3.0 (2); very tall with height/length >3.0 (3).

(190) Caudal vertebrae, transverse processes: absent beyond fifth caudal (0); present beyond fifth caudal (1).

(191) Caudal vertebrae, ratio of lengths of transverse processes and centra in anterior caudal vertebrae: equal or <1.0 (0); >1.0 (1).

(192) Chevrons, distal width of haemal spine: equivalent to proximal width (0); tapering (1); wider than proximal width (2).

(193) Gastralia: present (0); absent (1).

(194) Clavicles, position: anteroventral to the interclavicle (0); dorsal to interclavicle (1).

(195) Interclavicle, anterior margin with a median notch: absent (0); present (1).

(196) Interclavicle, posterior stem: little change in width along entire length (0); expansion present (1).

(197) Humerus, torsion between proximal and distal ends: around 45° or more from one another (0); 20° or less from one another (1).

(198) Humerus, capitellum (radial condyle) and trochlea (ulnar condyle): strongly developed as distinct ball-shaped structures (0); poorly developed but distinct from the ectepicondyle and entepicondyle (1); absent (2). ORDERED.

(199) Humerus, trochlea (ulnar condyle) situated approximately at mid-width of the distal end of the bone: present (0); absent, it is considerably laterally displaced (1).

(200) Ulna, olecranon process as a separate ossification: absent (0); present (1).

- (201) Ulna, olecranon process in lateral view: tapering toward its distal end (0); subrectangular or slightly expanded towards its distal end (1).
- (202) Radius, length: shorter than ulna (0); longer than ulna or approximately of the same length as the ulna (1).
- (203) Manus: greater than humeral length (0); subequal to or lower than humeral length (1).
- (204) Metacarpus, metacarpal IV: longer than metacarpal III (0); equal or shorter than metacarpal III (1).
- (205) Ilium, anteroposterior development of the iliac blade: well-developed (0); reduced (1).
- (206) Ilium, iliac blade: posterior process only (0); large posterior process and smaller anterior process (1); equally developed anterior and posterior processes (2); large anterior projection (3).
- (207) Pubis, pectineal process: absent (0); present (1).
- (208) Pubis and ischium, thyroid fenestra: absent (0); present (1).
- (209) Pubis, anterior apron: absent (0); present (1).
- (210) Femur, shaft: diameter constant or increasing distally (0); diameter distally decreasing (1).
- (211) Tibia, articulation with astragalus: loose fitting (0); tightly fitting with well-developed articulation (1).
- (212) Tarsus, foramen for the passage of the perforating artery between the astragalus and calcaneum (= perforating foramen): present (0); absent (1).
- (213) Astragalus, articulation with fourth distal tarsal: poorly defined (0); well defined (1); absent (2).

(214) Tarsus, number of pedal centralia: both medial and lateral centralia present (0); only lateral pedal centrale and does not contact tibia (1); only lateral pedal centrale and contacts the tibia (2); pedal centralia absent as sperate ossifications (3). ORDERED.

(215) Tarsus, first distal tarsal: present (0); absent (1).

(216) Metatarsus, ratio of lengths of metatarsals I and IV: equal or >0.42 (0); <0.42 and equal to or >0.32 (1); equal to or <0.32 (2). ORDERED.

(217) Metatarsus, metatarsal V lateral plantar tubercle in late ontogeny: absent (0); present (1).

(218) Metatarsus, metatarsal V medial plantar tubercle in late ontogeny: absent (0); present (1).

(219) Pedal digits, ratio of lengths of digits III and IV: equal or <0.8 (0); >0.8 and <0.9 (1); equal to or >0.9 (2). ORDERED.

Additional Characters with Character States

(220) Anterior (premaxillary) process of maxilla, length: short (0), greatly elongated (1).

(221) Maxillary and dentary tooth crowns with short parallel striae near apex on the lingual surface: absent (0), present (1).

APPENDIX 2. Character-taxon matrix

SUPPLEMENTARY DATA 2

Characters and character-states for phylogenetic analysis by Evans & Borsuk-Bialynicka (2009)

from Renesto & Bernardi (2014).

-
1. Lacrimal large with extensive exposure on cheek, 0; small, confined to orbital rim, 1; absent, 2.
 2. Greatest width of nasals exceeds greatest width of both external nares, 0; is less than the latter, 1.
 3. Frontoparietal suture more or less W shaped, subequal to or narrower than the nasofrontal suture in width, 0; suture more or less straight, broader than nasofrontal suture, 1.
 4. Parietal foramen within parietal, 0; on frontoparietal border or within frontal, 1; absent, 2.
 5. Postparietals present, 0; absent, 1.
 6. Tabulars present, 0; absent, 1.
 7. Postorbital overlain by postfrontal, 0; postfrontal overlain by postorbital, 1.
 8. Squamosal extends anteriorly halfway or less over lower temporal fenestra and is widely separated from jugal by postorbital, 0; extends more than halfway over lower temporal fenestra and comes close to or contacts jugal below postorbital, 1.
 9. Anterior process of quadratojugal present, 0; absent, 1.
 10. Posterior process of jugal extends about halfway back or less below lower temporal fenestra, 0; extends more than halfway back below lower temporal fenestra, 1.
 11. Quadratojugal always present as a separate element at some point in ontogeny, 0; never present as a separate element, 1.
 12. Supratemporal present, 0; fused or lost, 1.
 13. Supratemporal lies superficially, 0; lies deep association with ventral face of postparietal process, 1.
 14. Ventral process of squamosal present, 0; absent, 1.

15. Adductor chamber small, quadrate does not extend well below level of occipital condyle, 0; enlarged adductor fossa and quadrate extends well below adductor fossa, 1.
16. External nares paired, 0; confluent, 1.
17. Quadrate narrow in posterior view, 0; wide in posterior view forming lateral conch, 1.
18. Quadrate foramen present, 0; absent, 1.
19. Vomerine teeth numerous, 0; few or absent, 1.
20. Teeth or transverse flange of pterygoid present, 0; absent, 1.
21. Abducens canal absent or incomplete, 0; present and complete, 1.
22. Parasphenoid teeth present, 0; absent 1.
23. Paroccipital process does not extend laterally to contact quadrate, 0; process contacts quadrate, 1.
24. Paroccipital process not expanded distally, 0; expanded distally, 1.
25. Stapes thick and perforated for passage of stapedial artery in adults, 0; stapes thinner and imperforate in adults, 1; stapes columelliform and usually imperforate in adults, 2.
26. Quadrate straight in lateral view, 0; bowed, 1.
27. Postorbital contacts parietal, 0; separated from parietal, 1.
28. Posterior process of postorbital does not reach to posterior end of upper temporal fenestra, 0; process extends beyond posterior margin of upper temporal fenestra, 1.
29. Choanal fossa on palatine absent, 0; present, 1.
30. Snout comparatively shorter and broader, 0; longer and narrower, 1.
31. Premaxillae paired in full grown adults, 0; fused prior to hatching, 1.
32. Parietals paired in full grown adults, 0; fused prior to hatching, 1.

33. Exoccipital sutured to opisthotic above and below metotic fissure, 0; fused only above metotic fissure with metotic fissure extended ventrally into basioccipital, 1; metotic fissure subdivided to create a dorsal vagus foramen and a ventral opening for the glossopharyngeal nerve and perilymphatic sac, 2.
34. Frontals paired, 0; fused, 1.
35. Splenial present, 0; absent, 1.
36. Angular extends posteriorly to articular condyle, 0; does not, 1.
37. Angular extends more than one-third up lateral face of mandibular ramus, 0; less than one third, 1.
38. Retroarticular process relatively small or absent, 0; large, 1.
39. Outer one third of articular condyle formed by surangular, 0; formed entirely by articular, surangular forming only outer rim, 1.
40. Teeth set in shallow sockets or depressions, 0; superficially attached to medial side of jaw with labial wall higher than lingual one, but only slightly, 1; labial wall significantly higher than lingual wall (pleurodont), 2.
41. Neural arches fuse to their respective centra in postembryonic development, 0; in embryo, 1.
42. Zygosphenes and zygantra, absent, 0; present, 1.
43. Caudal autotomy septa absent, 0; present, 1.
44. Trunk vertebrae without accessory articulations between neural spines, 0; accessory articulations present, 1.
45. Intercentra present in trunk, 0; absent, 1.
46. Vertebrae amphicoelous notochordal, 0; amphicoelous solid, 1; procoelous, 2.
47. Transverse processes not elongated, 0; short, 1; long, 2.

48. One or more cervical ribs bear two distinct heads, 0; all ribs single-headed, 1; one or more ribs with three heads, 2.
49. No trunk vertebrae without free ribs, 0; one or more postsacrals without free ribs (lumbar), 1.
50. Sacral and caudal ribs fuse to their respective centra in postembryonic development, 0; fuse in embryo, 1.
51. Rib-bearing portion of sternum a single rod, 0; this region of sternum enlarged and formed from two plates, which remain paired until nearly maximum size, 1; paired sternal plates fuse in embryo, 2.
52. Anterior margin of scapulocoracoid without fenestrae, 0; fenestrated, 1.
53. Interclavicle robust, 0; gracile, 1.
54. Entepicondylar foramen of humerus present, 0; absent, 1.
55. Prominent posteromedial process of distal epiphyses of radius absent, 0; present, 1.
56. Metacarpal IV longer than third, 0; metacarpals III and IV subequal, 1; metacarpal IV shorter than metacarpal III, 2.
57. Ilium includes 80–85 % of acetabulum, 0; 60–65 % of acetabulum, 1.
58. Pubic flange on ilium absent, 0; present, 1.
59. Iliac blade long, 0; short, 1.
60. Anteromedial portion of pubis not out-turned dorsally, 0; out-turned dorsally, 1.
61. Dorsal edge of ilium essentially horizontal, 0; more steeply inclined, 1.
62. Pelvis a solid plate, 0; small thyroid fenestra with broad pubic symphysis, 1; large fenestra with small pubic symphysis, 2.
63. Ischial tubera short, 0; long, 1.
64. In fully grown individuals, pelvic elements separate, 0; fused, 1.

65. Fibula and femur articulate end to end, distal femoral condyles symmetrical, 0; fibula sits in a recess on lateral margin of distal end of femur, distal femoral condyles markedly asymmetrical, 1.

66. Articular surface of fibula for astragalocalcaneum restricted to small portion of the distal end, 0; covers most of distal end of fibula, 1.

67. Astragalus and calcaneum separate throughout ontogeny, 0; fused prior to fusion of scapulocoracoid, 1.

68. Lateral centrale of pes discrete throughout ontogeny, 0; fused to astragalus in embryo, 1.

69. Distal tarsal 1 present, 0; absent 1.

70. Distal tarsal 2 present, 0; absent 1.

71. Distal tarsal 5 present at some point in postembryonic ontogeny, 0; absent or fused in embryo, 1.

72. Metatarsal V straight, 0; inflected, somewhat hooked but without enlarged plantar tubercles, 1; hooked, inflected angulated proximally and with enlarged medial and lateral plantar tubercles, 2.

73. Ridge on distal extremity of tibia for astragalar articulation, 0; no ridge present, 1.

74. No tongue and groove articulation between distal tarsal 4 and astragalocalcaneum, 0; process on distal tarsal 4 extends under astragalocalcaneum to form partial tongue and groove articulation, 1; full tongue and groove articulation, 2.

75. Premaxilla without posterolateral process excluding maxilla from narial rim, 0; with posterolateral process, 1.

76. Cervical vertebrae not elongated, 0; elongated, 1.

77. Astragalus and calcaneums without specialized joint between them, 0; with specialized joint,
1.
