Supplementary Table S1: Cell divisions decrease in confinement. The mean, cell count, and ANOVA letters (from post-hoc Tukey tests) for the fraction of cells that divide across varying degrees of confinement. Groups that do not share a letter are significantly different.

Fraction that Divide			
Degree of Confinement	Mean	Cell Count	ANOVA
2D	0.7	22	A
50 µm	0.23	131	B
20 µm	0.147	227	BC
10 µm	0.155	99	C
6 µm	0.096	202	CD
3 µm	0.05	160	D

Supplementary Table S2: Cell and nuclear morphologies are altered in confinement. The mean, cell count, and ANOVA letters (from post-hoc Tukey tests) for cell area (Fig. 2D), cell aspect ratio (Fig. 2G), nuclear area (Fig. 2E), and nuclear aspect ratio (Fig. 2H) across all degrees of confinement and 2D controls. Groups in a column that do not share a letter are significantly different.

		Cell Area			Cell Aspect Ratio			Nuclear Area			Nuclear Aspect Ratio		
Cell Cycle Stage	Degree of Confinement	Mean	Cell Count	ANOVA Value	Mean	Cell Count	ANOVA Value	Mean	Cell Count	ANOVA Value	Mean	Cell Count	ANOVA Value
G1	2D	958.27	249	A	3.33	249	GH	171.91	208	E	1.92	208	G
	50 µm	468.91	144	EFG	3.17	144	GH	175.58	203	E	1.97	203	FG

Supplementary Table S3: Nuclear morphology is altered in confinement. Mean, cell count, and ANOVA letters (from post-hoc Tukey tests) for the major (Fig. 2J) and minor (Fig. 2K) axis of the fitted nuclear ellipse across varying degrees of confinement and cell cycle stages. Groups in a column that do not share a letter are significantly different.

Nuclear Axis Length	Degree of Confinement	G1			S/G2/M		
		Mean	Cell Count	ANOVA Value	Mean	Cell Count	ANOVA Value
Major	2D	11.13	150	E	13.8	138	C
	50 µm	13.52	66	D	20.05	46	B
	20 µm	15.84	95	D	22.72	61	B
	10 µm	20.26	38	C	28.03	61	A
	6 µm	28.91	120	B	22.49	56	B
	3 µm	35.36	94	A	28.03	80	A
Minor	2D	5.86	150	FG	7.31	138	E
	50 µm	6.66	66	F	10.42	46	D
	20 µm	7.26	95	F	10.51	61	D
	10 µm	7.3	38	F	6.74	61	E
	6 µm	4.11	120	GH	2.36	56	F
	3 µm	3.37	94	H	1.83	80	F

Supplementary Table S4: Cell migration is altered in confinement. Mean, cell count, and ANOVA letters (from post-hoc Tukey tests) for cell speed (Fig. 3B) and chemotactic index (Fig. 3C) of both cell cycle stages across varying degrees of confinement. Groups in a column that do not share a letter are significantly different.

Cell Cycle Stage	Degree of Confinement	Cell Speed			Chemotactic Index		
		Mean	Count	ANOVA Value	Mean	Count	ANOVA Value
G1	2D	38.84	178	G	0.504	178	DE
	50 µm	115.22	162	B	0.51	163	DE
	20 µm	131.4	136	A	0.579	136	CDE
	10 µm	104.55	52	BCD	0.767	52	AB
	6 µm	100.61	51	BCD	0.634	51	ABCD
	3 µm	61.87	86	EF	0.729	86	AB
S/G2/M	2D	40.01	154	G	0.474	154	E
	50 µm	97.87	118	CD	0.531	118	DE
	20 µm	107.33	60	BC	0.611	60	BCDE
	10 µm	82.7	66	DE	0.718	66	ABC
	6 µm	55.2	64	FG	0.789	64	A
	3 µm	49.92	69	FG	0.739	69	AB

Supplementary Table S5: S/G2/M stage is lengthened in confinement. Mean, cell count, and ANOVA letters (from post-hoc Tukey tests) of time cell spends in the channel (Fig. 4A) across both cell cycle stages and varying degrees of confinement. Groups in a column that do not share a letter are significantly different.

Cell Cycle Stage	Time in Channel			
	Degree of Confinement	Mean	Cell Count	ANOVA
G1	2D	282	10	EF
	50 µm	316.92	13	F
	20 µm	338.57	7	F
	10 µm	290	10	F
	6 µm	298	10	F
	3 µm	317.78	9	F
S/G2/M	2D	480	7	DE
	50 µm	714.29	7	C
	20 µm	810.19	3	BC
	10 µm	650	2	CD
	6 µm	972.5	4	B
	3 µm	1206	5	A

Supplementary Table S6: Cells continue to divide less frequently after exiting confinement.

Mean, cell count, and ANOVA letters (from post-hoc Tukey tests) for the fraction of cells that divide during and after confinement (Fig. 5B) across varying channel widths. Groups that do not share a letter are significantly different.

		Fraction that Divide			
		Degree of Confinement	Mean	Cell Count	ANOVA
During Confinement	2D	0.7	22	A	
	50 µm	0.23	131	BC	
	20 µm	0.15	227	CDE	
	10 µm	0.15	99	BCDE	
	6 µm	0.1	202	DF	
	3 µm	0.05	160	EF	
Post-Confinement	50 µm	0.45	7	AB	
	20 µm	0.24	10	BCDEF	
	10 µm	0.22	13	BCDEF	
	6 µm	0.2	10	BCDEF	
	3 µm	0.25	29	BCD	

Supplementary Table S7: Cell cycle stage time returns to normal after cells leave confinement. Mean, cell count, and ANOVA letters (from post-hoc Tukey tests) for the time cells spend in each stage of the cell cycle, during and post confinement, across varying degrees of confinement (Fig. 5C). Groups that do not share a letter are significantly different.

		Time in Channel				
		Cell Cycle Stage	Degree of Confinement	Mean	Cell Count	ANOVA
During Confinement	G1	50 µm	2D	282	10	F
			2D	480	7	DE
			20 µm	316.923	13	F
			10 µm	338.571	7	EF
			6 µm	290	10	F
			3 µm	298	10	F
			50 µm	317.778	9	EF
	S/G2/M	50 µm	2D	714.286	7	C
			2D	810.187	3	BC
			20 µm	650	2	CD
			10 µm	972.5	4	B
			6 µm	1206	5	A
Post-Confinement	G1	50 µm	20 µm	259.091	11	F
			20 µm	266.667	9	F
			10 µm	370	11	EF
			6 µm	318.889	9	EF
			3 µm	327.5	8	EF
	S/G2/M	50 µm	20 µm	598.333	6	CD
			20 µm	728.333	6	B
			10 µm	755	6	BC
			6 µm	716.667	6	C
			3 µm	680	2	BCD

Supplementary Table S8: Cell and nuclear area, but not shape are altered post-confinement. Mean, cell count, and ANOVA letters (from post-hoc Tukey tests) for cell area (Fig. 5D), cell aspect ratio (Fig. 5F), nuclear area (Fig. 5E), and nuclear aspect ratio (Fig. 5G) in both stages of the cell cycle and across varying degrees of confinement. Groups in a column that do not share a letter are significantly different.

		Cell Area			Cell Aspect Ratio			Nuclear Area			Nuclear Aspect Ratio			
Cell Cycle Stage	Degree of Confinement	Mean	Cell Count	ANOVA Value	Hide	Cell Count	ANOVA Value	Mean	Cell Count	ANOVA Value	Mean	Cell Count	ANOVA Value

Supplementary Movie Captions:

Supplementary Movie 1. Example of abnormal division event in FUCCI-expressing mouse sarcoma cell in 3 μ m wide fibronectin-coated channel. Cell divides into two daughter cells, and then fuses into one multinucleated cell. Total length of movie is 1000 minutes.

Supplementary Movie 2. Example of abnormal division event in FUCCI-expressing mouse sarcoma cell in 6 μ m wide fibronectin-coated channel. Cell divides into two daughter cells, and then fuses into one multinucleated cell. Total length of movie is 830 minutes.

Supplementary Movie 3. Example of abnormal division event in FUCCI-expressing mouse sarcoma cell in 20 μ m wide fibronectin-coated channel. Cell divides into three individual daughter cells. Total length of movie is 250 minutes.

Supplementary Movie 4. Example of normal division event in FUCCI-expressing mouse sarcoma cell in 10 μ m wide fibronectin-coated channel. Total length of movie 380 minutes.
