## Supplementary Figure Legends:

**Figure S1.** NFKB, MAPK/JNK, and TLR signaling pathways in the intestine of *Hmgb1*<sup>ΔIEC</sup> mice compared with the *Hmgb1*<sup>loxP/loxP</sup> mice. (A) Western blot analysis of NFKB and MAPK/JNK expression in intestinal epithelial cells of *Hmgb1*<sup>loxP/loxP</sup> and *Hmgb1*<sup>ΔIEC</sup> mouse 8 h post *Salmonella* Typhimurium infection. (B) Western blot analysis of TLR in intestine of *Hmgb1*<sup>loxP/loxP</sup> and *Hmgb1*<sup>ΔIEC</sup> mouse 8 h postinfection. VIL1 is used as a marker for epithelial cells and an internal control. ACTB is also used as an internal control. (n = 3).

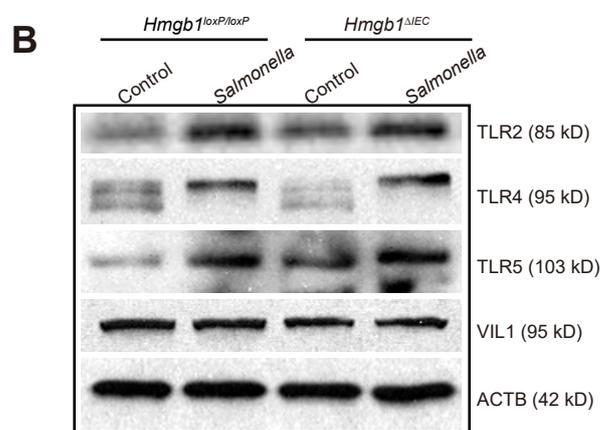

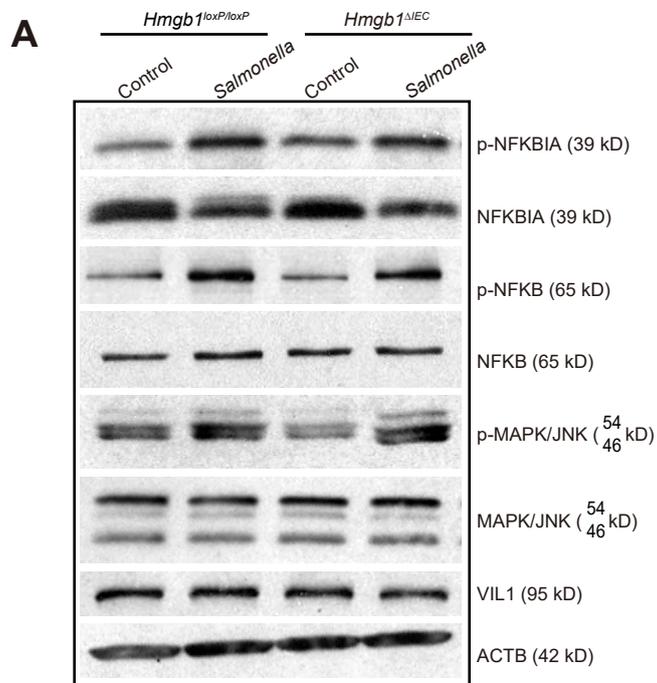

**Figure S2.** The absence of gene targeted-deletion of intestinal epithelial *Hmgb1* increased p-STAT3 and led to total STAT3 nuclear translocation *in vitro*. (A) Western blot analysis of p-STAT3 and STAT3 expression of *Hmgb1*<sup>+/+</sup> and *hmgb1*<sup>-/-</sup> MEF cells colonized with wild-type *Salmonella* Typhimurium. (B) Western blot analysis of p-STAT3 and STAT3 levels in cytosolic (C) and nuclear (N) extracts isolated from *Hmgb1*<sup>+/+</sup> and *hmgb1*<sup>-/-</sup> MEF cells colonized with wild-type *Salmonella* Typhimurium. The nuclear protein SP1, which is absent in the cytosol, served as a nuclear protein loading control. Cytosolic and nuclear protein density expression normalized with total protein. The red arrow marks p-STAT3. (C) The relative intensity of cytoplasmic and nuclear STAT3 from *Hmgb1*<sup>+/+</sup> and *hmgb1*<sup>-/-</sup> MEF cells colonized with wild-type *Salmonella* Typhimurium (n=3/group. student's t-test, \*p<0.05). Cytosolic and nuclear protein density expression normalized with total protein.

**Figure S3.** HMGB1 could interact with STAT3. (A) Detailed information of HMGB1 interaction with STAT3 by using PrePPI software. (B) PrePPI-predicted 3 binding domains in HMGB1. (C) PrePPI-predicted 5 binding domains in STAT3.

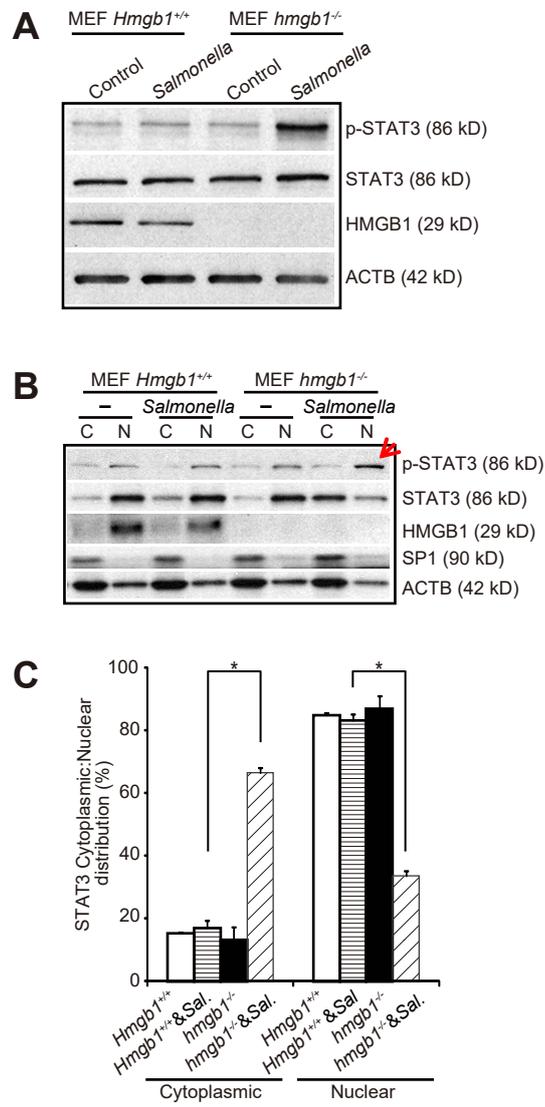

**Figure S4.** Nuclear STAT3 was decreased and cytosolic STAT3 was increased in *Salmonella*-infected MEF *hmgb1*<sup>-/-</sup> cells. (A) STAT3 and HMGB1 staining of *Hmgb1*<sup>+/+</sup> and *hmgb1*<sup>-/-</sup> MEF cells colonized with wild-type *Salmonella* Typhimurium. MEF cells were grown in the Lab-Tek chambered coverglass system. The MEFs were colonized with

*Salmonella* Typhimurium for 30 min, washed, and incubated in fresh DMEM medium for 30 min. Images for each protein shown represent 3 separate experiments.

A

**Protein**  
 Protein: High mobility group protein B1 (High mobility group protein 1) (HMG-1)  
 Uniprot id: P09429  
 Uniprot ac: HMGB1\_HUMAN  
 Gene name: HMGB1  
 Other name: HMG1

**Interactions**  
 Show only predictions in same cellular compartment:   
 Do not show predictions with possible paralogs:   
 Show interactions with: both experimental and/or predicted evidence ▾  
 Show interactions with: with or without structural model  
 Show interactions with a probability higher than (default .5):
