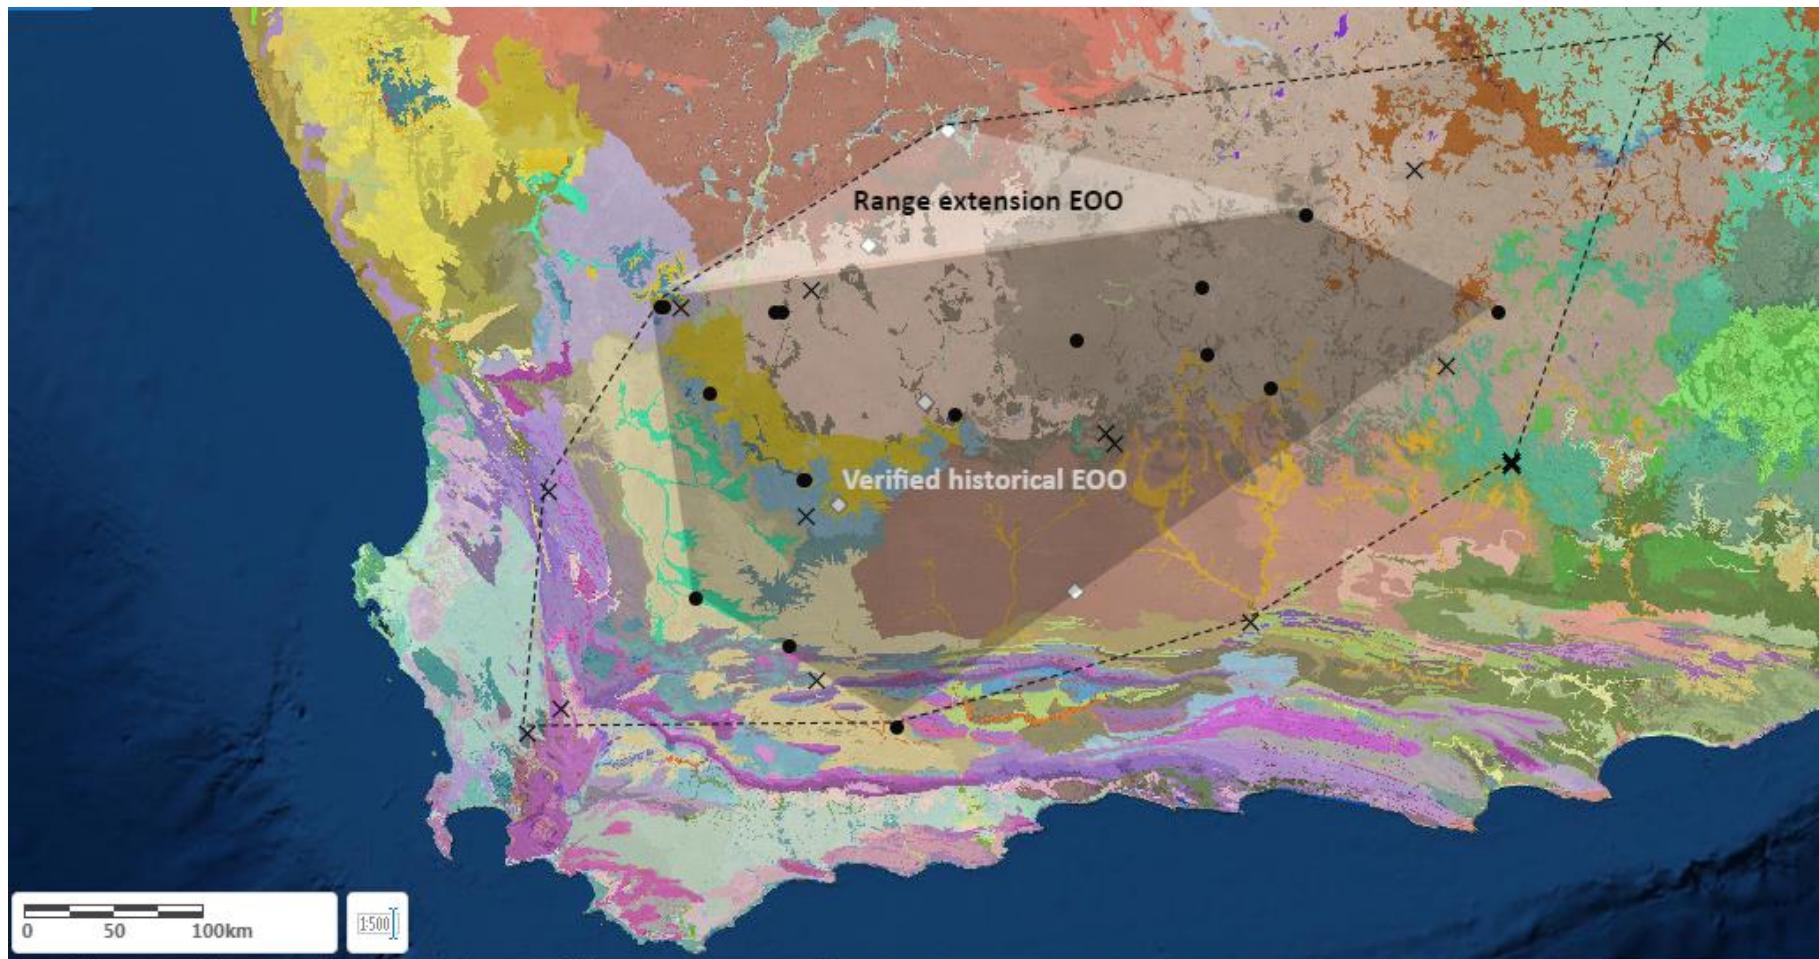

Figure S1: Map showing the distribution records of *Micromys granti*, based on historical records (black circles) verified by multivariate morphometrics and/or genotyping; published but unverifiable records (x); and new records (white triangles) documented by this study, in relation to bioregions and vegetation types of the SANBI 2012 Vegetation Map of South Africa. Shading indicates verified minimum convex polygon extent of occurrence (EOO) ranges based on historical verified records; range-extension records provided by this study; and the possible EOO if unverified records are included. See Supplementary Table 1 for a list of records and associated vegetation units and data sources.

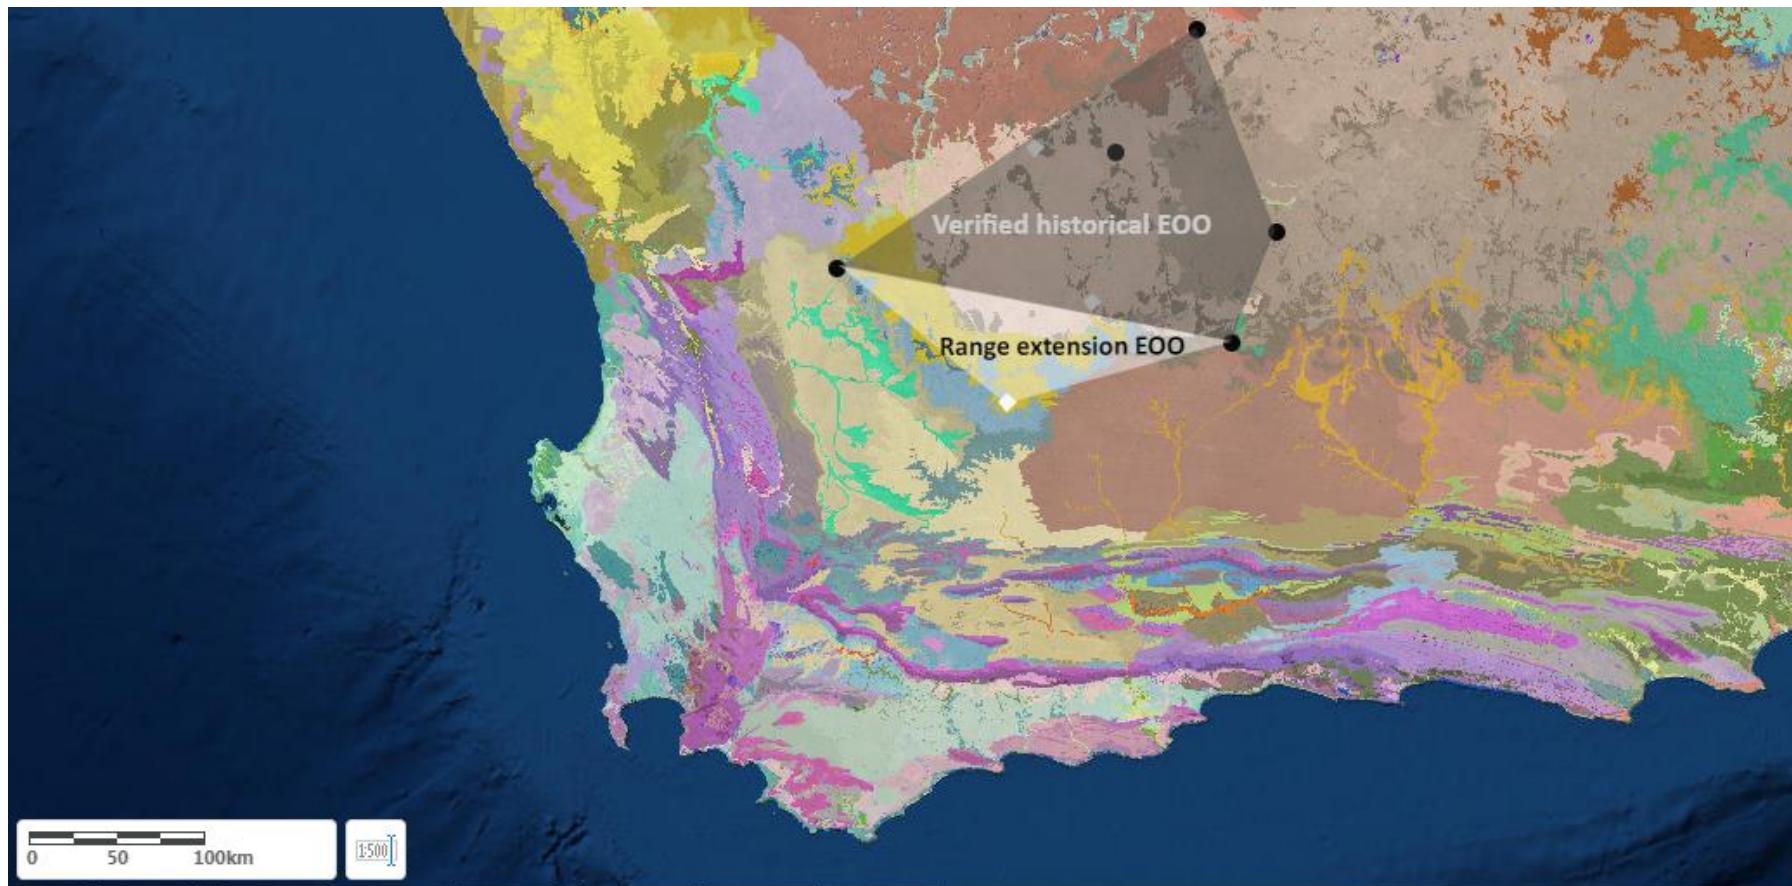

Figure S2: Map showing the distribution records of *Elephantulus pilicaudus*, based on historical records (black circles) verified by multivariate morphometrics and/or genotyping (Smit et al. 2008) and new records (white triangles) documented by this study, in relation to bioregions of the SANBI 2012 Vegetation Map of South Africa. Shading indicates verified minimum convex polygon extent of occurrence (EOO) ranges based on historical verified records; and range-extension records provided by this study. See Supplementary Table 2 for a list of records and associated vegetation units and data sources
