Supplementary figure

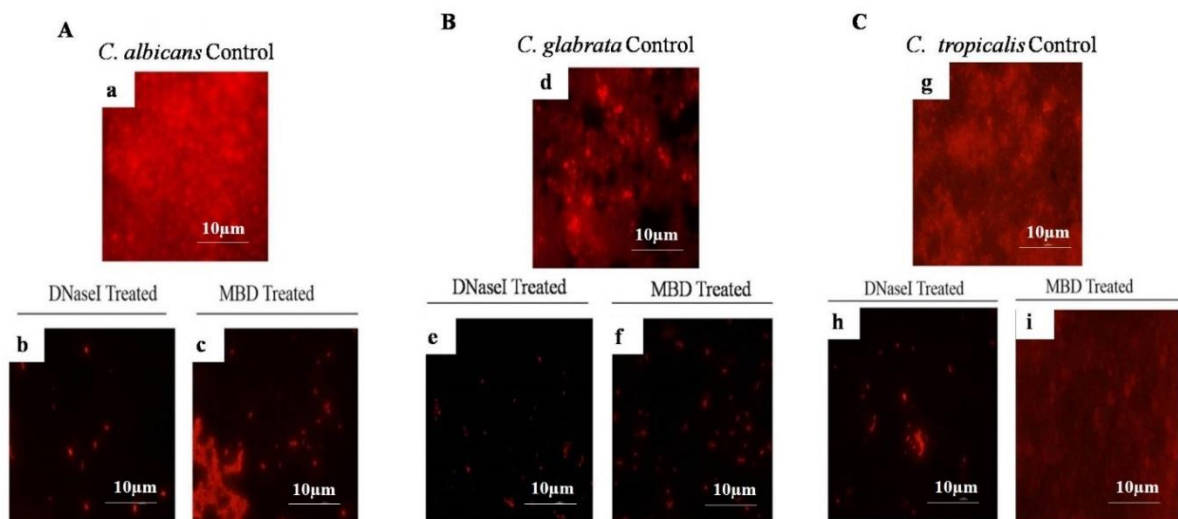

Figure. S1 Fluorescent imaging of reduction in accumulation of e-DNA using PI staining (a) *C. albicans* control, (b) DNase I treated, (c) MBD treated, (d) *C. glabrata* control, (e) DNase I treated, (f) MBD treated, (g) *C. tropicalis* control, (h) DNase I treated, (i) MBD treated.

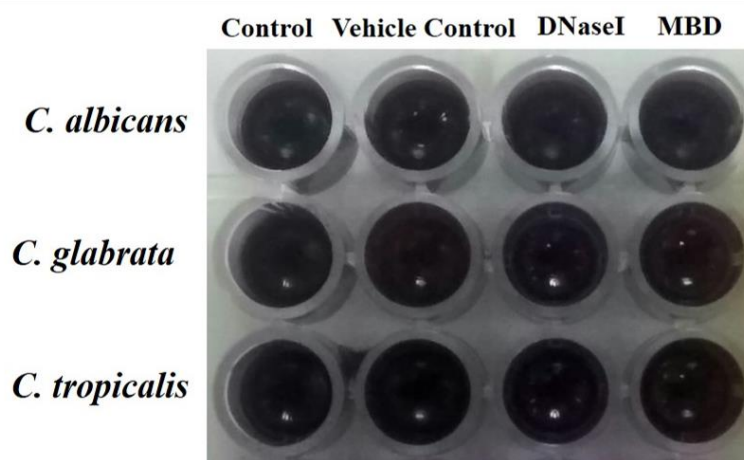

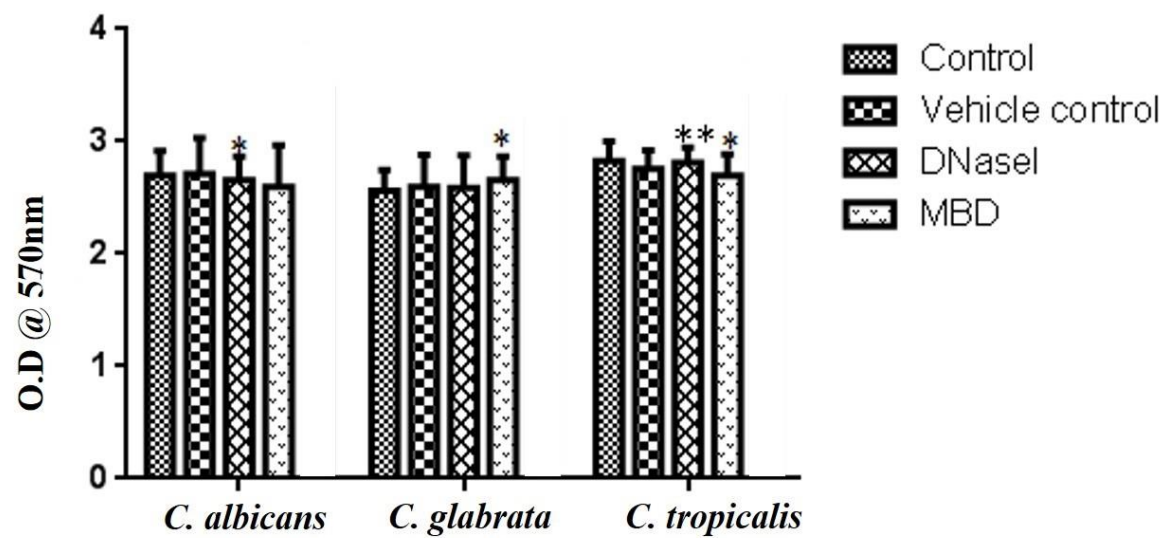

Figure. S2 Cell viability analysis by MTT assay. One way ANNOVA test demonstrates significant difference between the control and treated. Single asterisk indicates significance at P value < 0.05.
