Ostrich 2021

Using digital photography to study moult extent in breeding seabirds

Alexis M Osborne and Peter G Ryan

Supplementary Figure 1: Fieldworker gently extending the wing of an incubating Southern Giant Petrel without having to restrain the bird in preparation for taking moult photographs

Supplementary Figure 2: Fieldworkers restrain a Wandering Albatross adjacent to its nest at Marion Island and spread one wing in preparation for taking moult photographs of the upper wing. Note box covering the egg on the nest to protect it from Brown Skuas *Stercorarius antarcticus*
